

# EE 437/538B: Integrated Systems

## Capstone/Design of Analog Integrated Circuits and Systems

### Lecture 1: Logistics & Intro

Prof. Sajjad Moazeni

[smoazeni@uw.edu](mailto:smoazeni@uw.edu)

Spring 2022

# *Course Information*

- Instructor:
  - Prof. Sajjad Moazeni
  - M422 ECE, [smoazeni@uw.edu](mailto:smoazeni@uw.edu)
  - Office hours by email appointment
- Website:
  - UW Canvas (<https://canvas.uw.edu>)
  - Lectures (annotated), discussions, Zoom meetings!!!
  - Lectures: 2:30 pm -4:30 pm on Tue/Thu
- No TA/Grader

# *Introduce yourself ...*

- Name
- Grad / Undergrad
- Major
- Which year?
- Your advisor
- Your research/background/interests
- Why interested in this course?

# Topics

## Course Objectives:

- Learn basic architecture of a wireline/optical transceiver (TRx)
- Learn the challenges and gain design experience of some major blocks
- Present and report your work in a professional academic format

Week	Lectures
Week 1	Lect. 1: Course Logistics & Intro (March. 29)
	Lect. 2: Channel pulse model
Week 2	Lect. 3: Overview of equalization techniques & Basic TRx blocks
	Lect. 4: Basic TRx blocks & Examples of the state-of-the-art wireline TRx
Week 3	Lect. 5: Optical Interconnects (Overview)
	Lect. 6: Optical Interconnects (Modulators & Silicon Photonics)
Week 4	<b>Project Assignments and Discussion</b>
	Lect. 7: MRM-based Optical Tx
Week 5	<b>Literature Review Presentations</b>
	Lect. 7: MRM-based Optical Tx (part 2)
Week 6	Project Discussion
	Lect. 8: Optical Rx Analog Front-end
Week 7	Project Discussion
	Lect. 9: Timing Basics (Jitter, Clock distribution, etc.)
Week 8	Project Discussion
	Lect. 10: Timing (PLL)
Week 9	Project Discussion
	Lect. 11: Timing (CDR)
Week 10	<b>Final Presentations</b>
	<b>Final Presentations</b>

# *Grades & Project*

- **Group Project**

- Groups of two students
- Will be assigned and discussed by the end of Week 2 (so that you can do proper literature review for Week 5)
- Details of project will be finalized by Week 4
- We will discuss progress, results, simulations every week in “Project Discussion Sessions”

## **Grading**

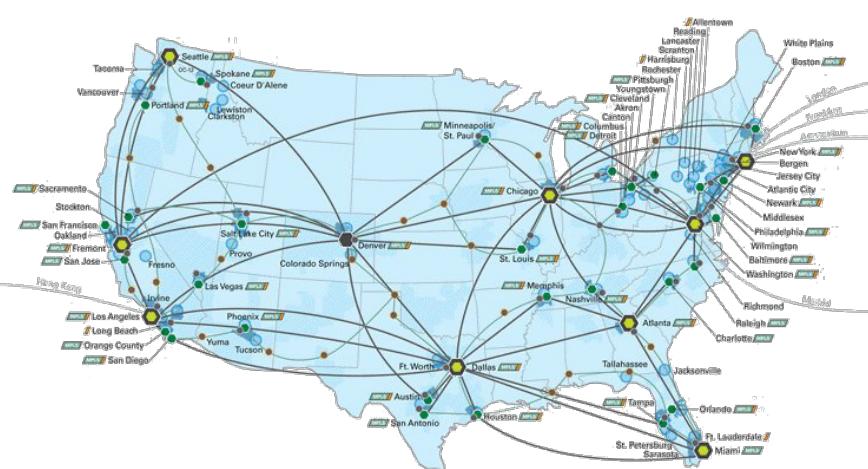

- Class Participation: 20%
- Project: 60%
  - Lit. Review: 20%
  - Final presentation: 20%
  - Paper: ~~20%~~  
*40%*

# *Resources*

- EE 538B Slides/Videos
- Sam Palermo's slides from Texas A&M:
  - <https://people.engr.tamu.edu/spalermo/ecen720.html>
  - [https://people.engr.tamu.edu/spalermo/ecen689\\_oi.html](https://people.engr.tamu.edu/spalermo/ecen689_oi.html)
- Elad Alon's lectures from UC Berkeley (Wireline TRx):
  - <https://archive.org/details/ucberkeley-webcast-PL81E2F15D026EEA81>
- Recent papers and lectures to be shared on Canvas

# Interconnects

## US IT Map

Inter-continents

## Large Data Centers

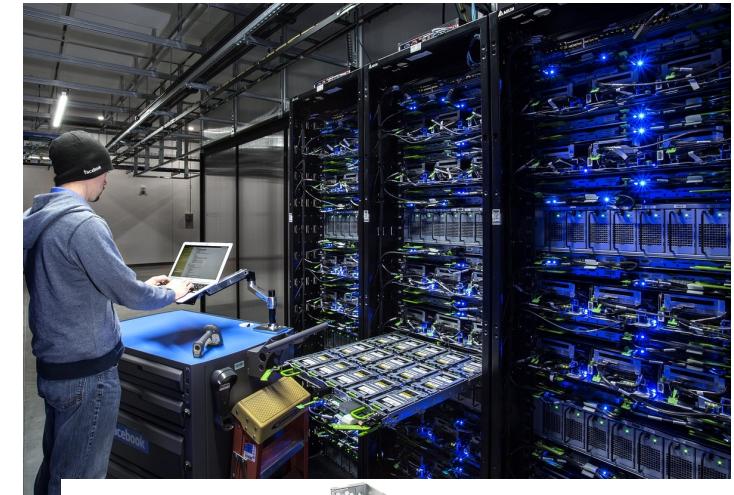

inter-datacenter

intra-data center

inter-rack

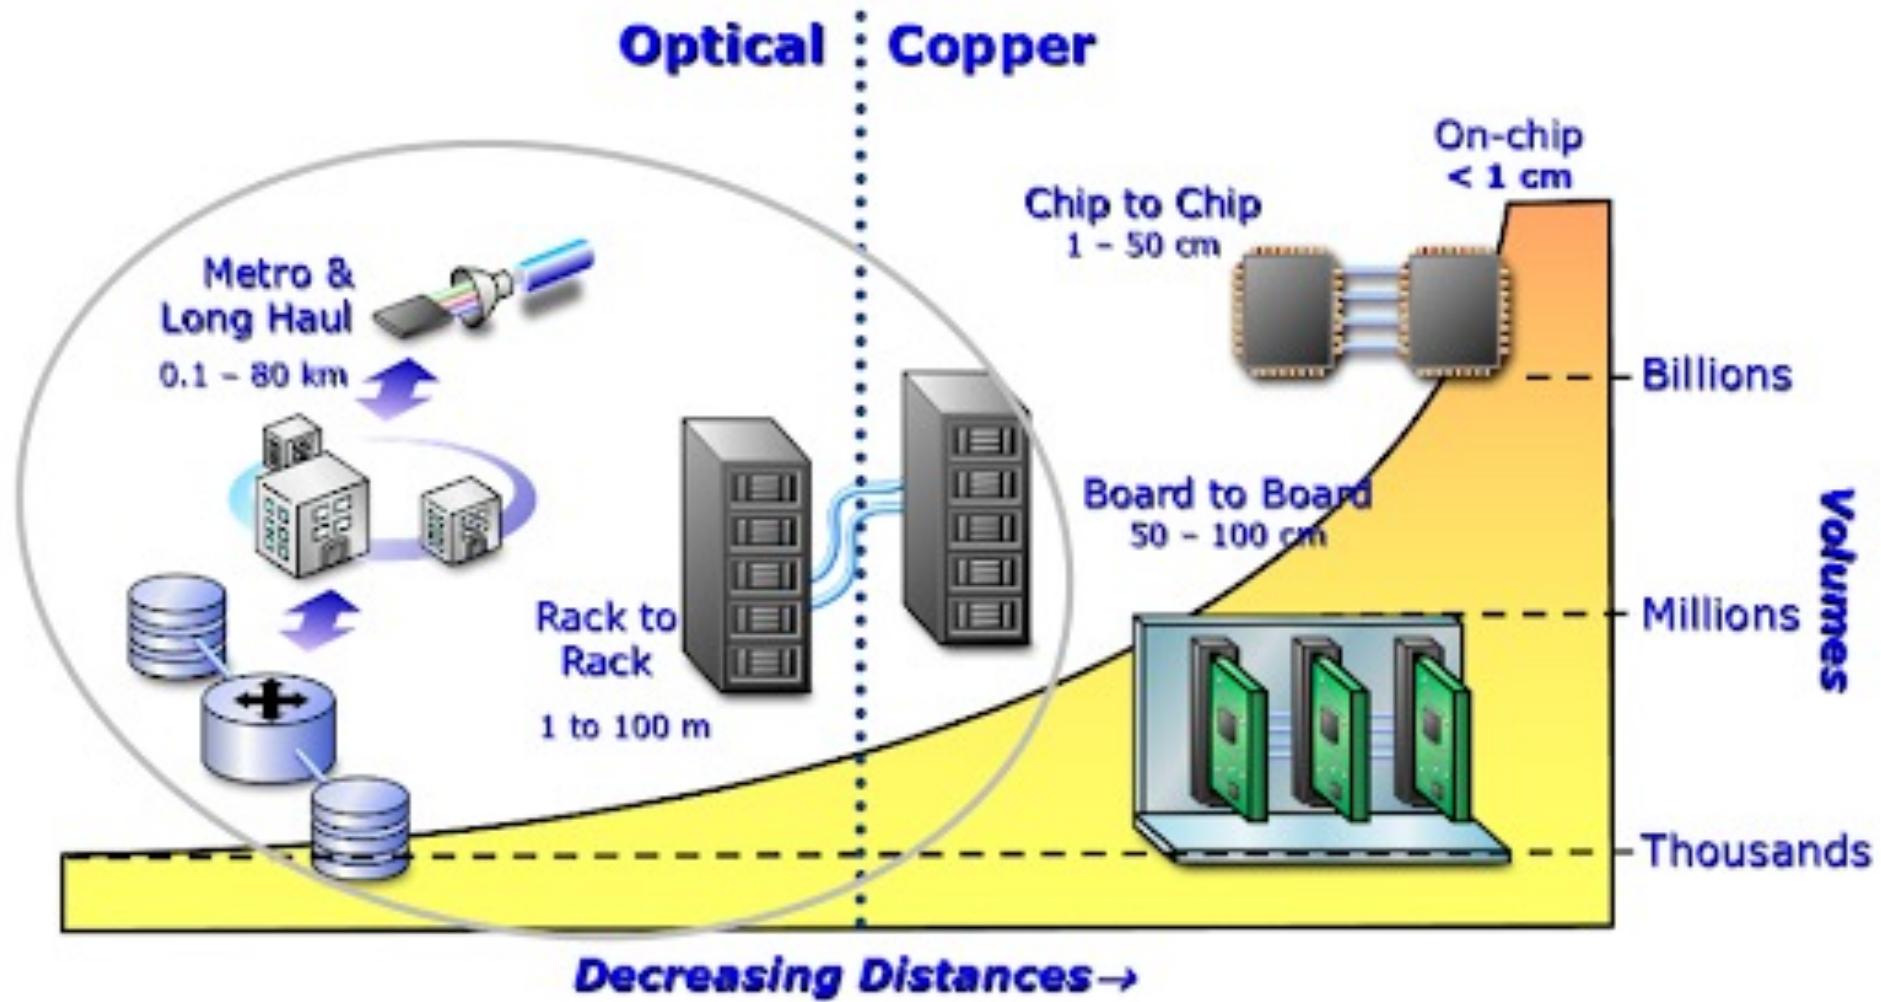

## Server Racks/Blades

Chip-to-chip

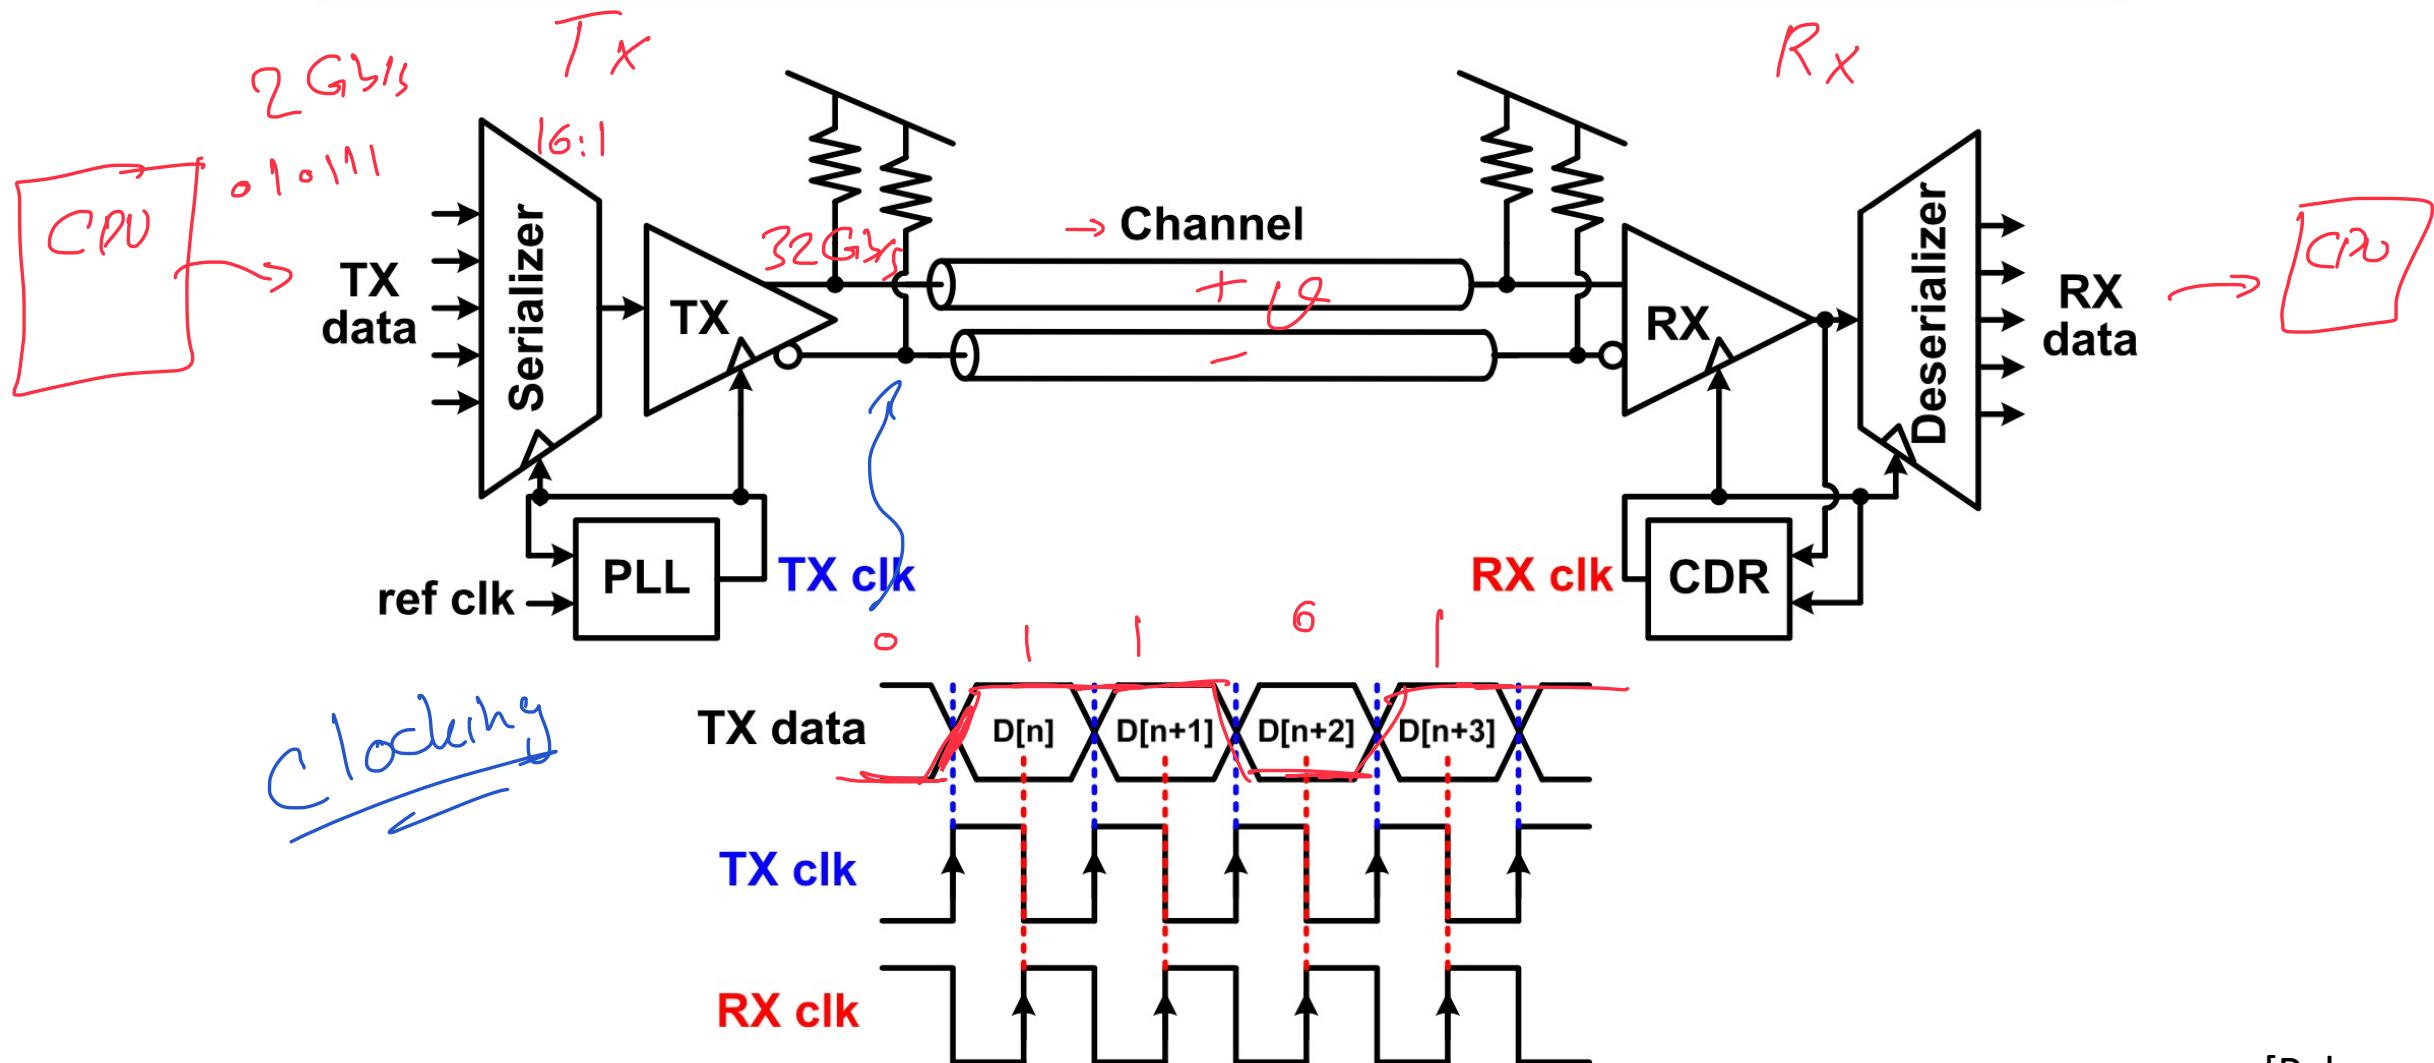

# Interconnects

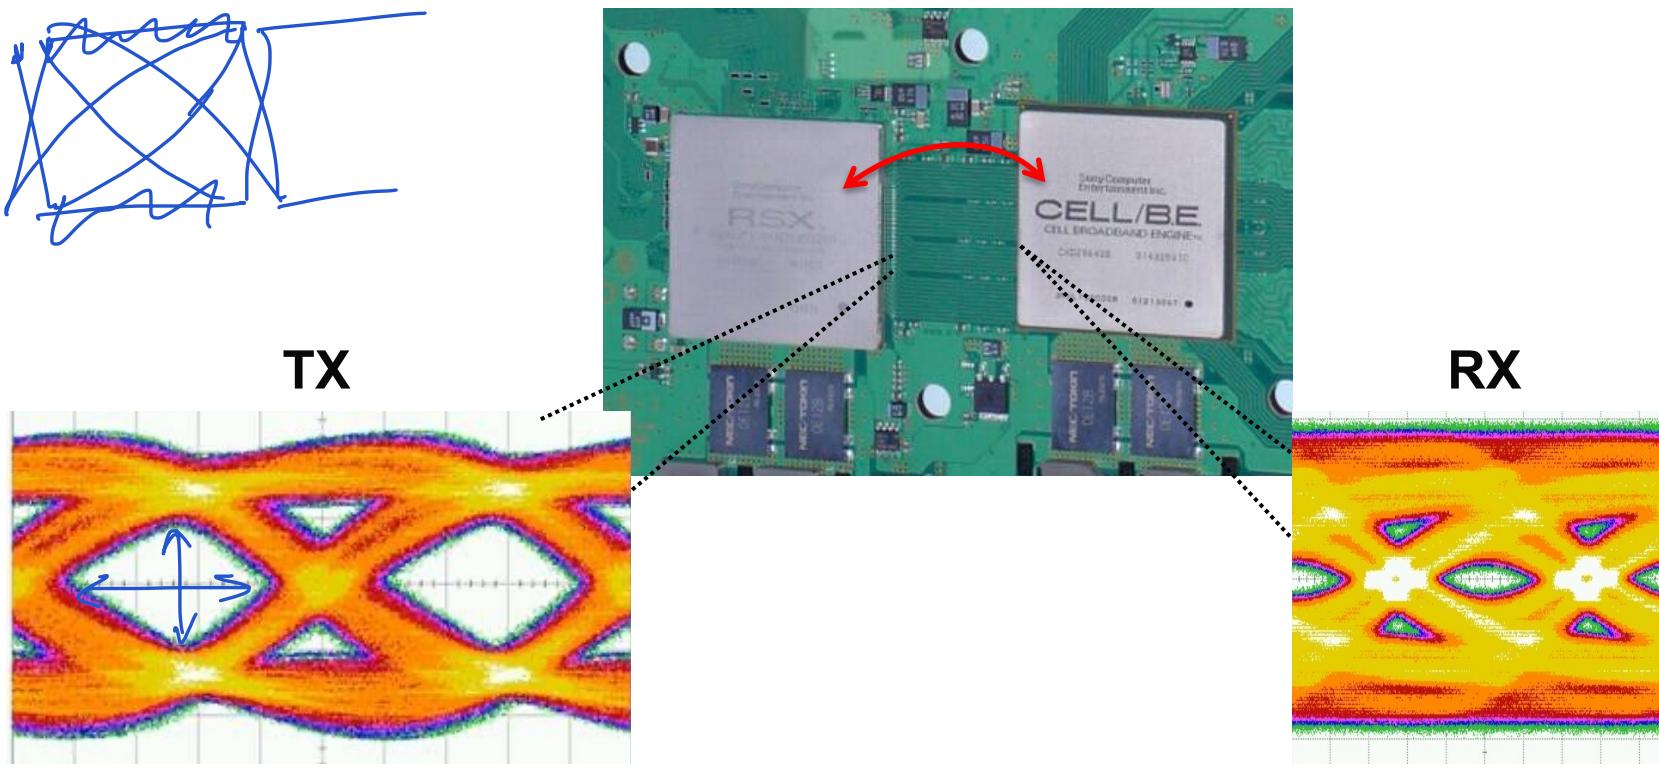

Source: Prof. John Bowers

# High-Speed Electrical Link System

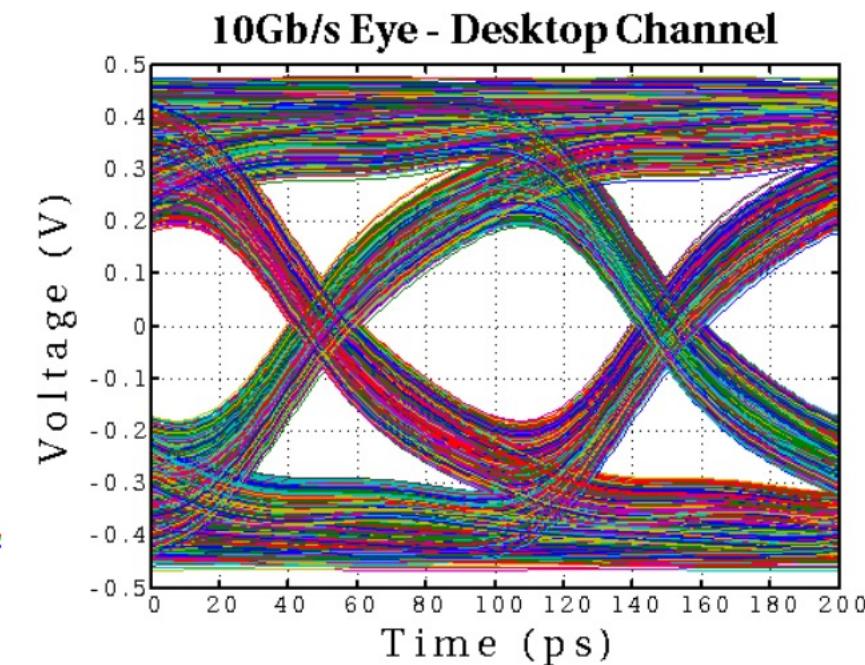

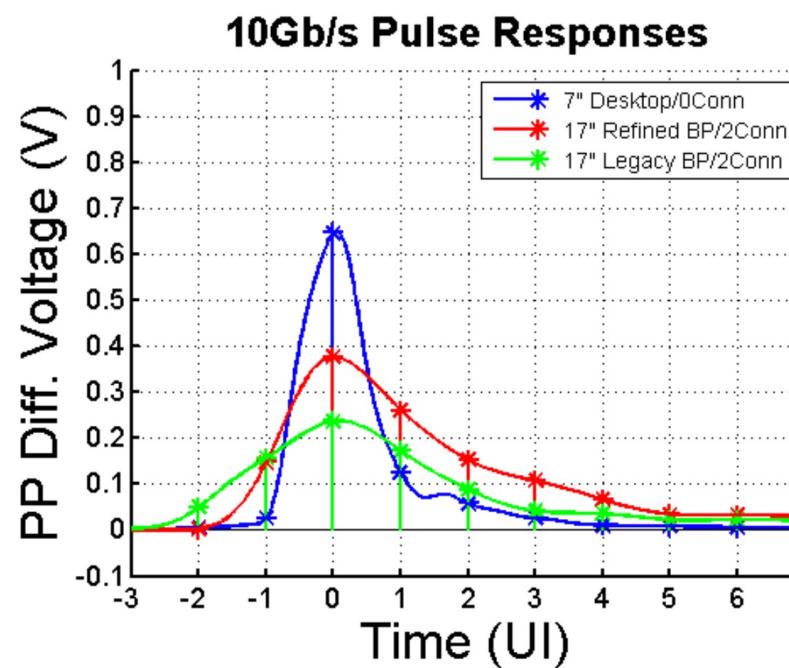

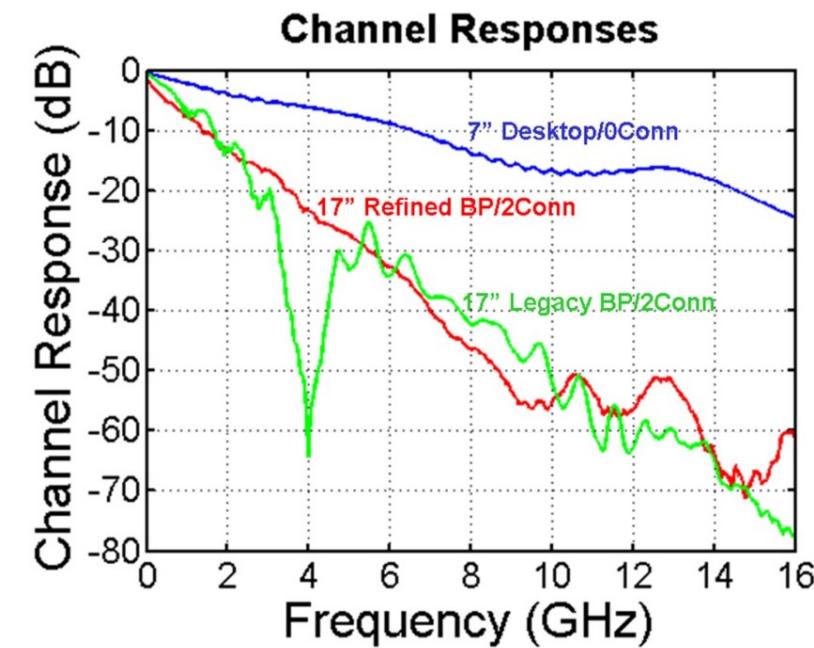

# Wireline Interconnects

- Transmitter (Tx) + Channel + Receiver (Rx)
  - a.k.a SerDes (look at next slide)

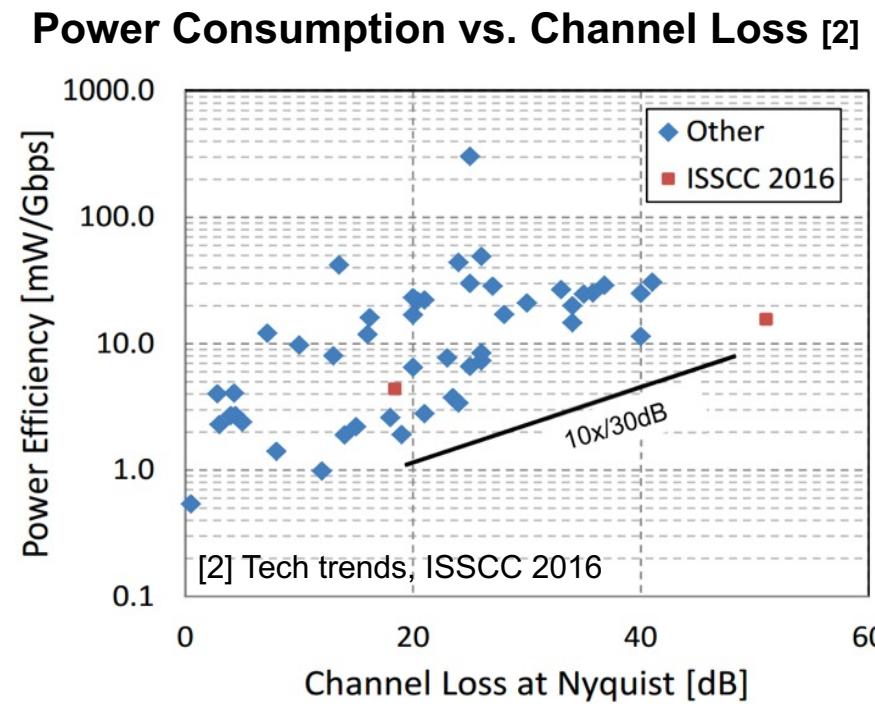

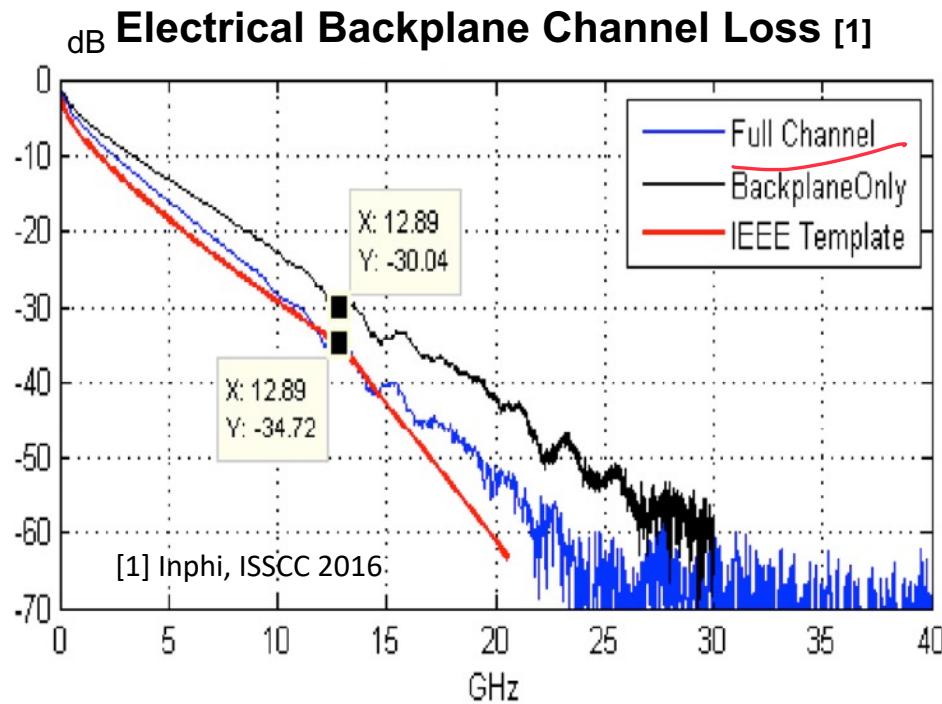

(Elad Alon)

# *Channel Example*

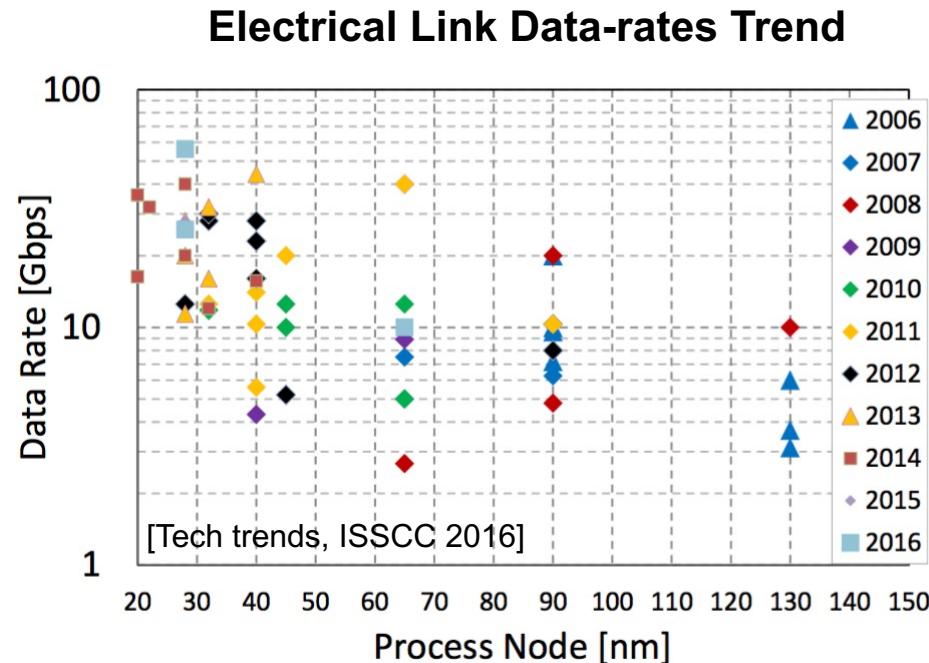

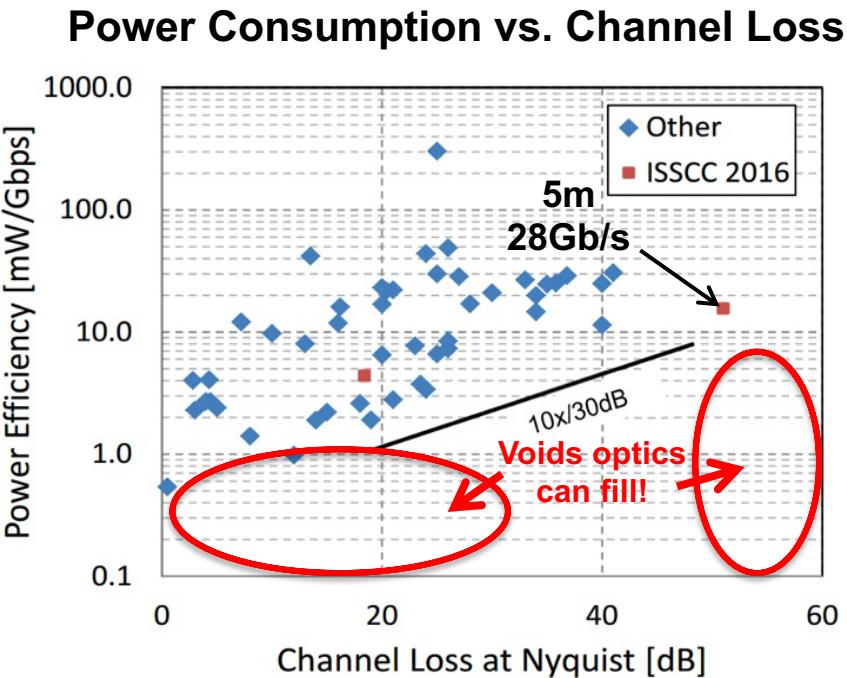

# Electrical Links Limitations

- High data rate → High channel loss → High transceiver power
- **10 pJ/bit** with -40 dB channel loss at Nyquist frequency

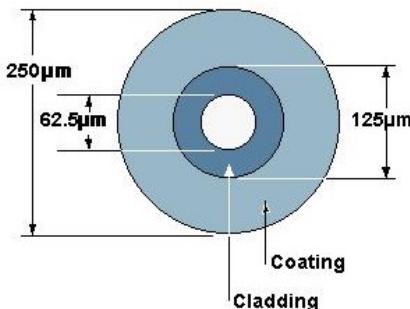

# Electrical Links Limitations

- Higher data rates & Longer channels → Higher channel loss
- Moore's law !? ...
- **Optical links can break this barrier!**

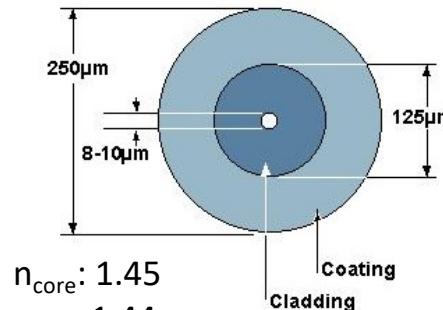

# Fiber Optics

Multi-Mode (MMF)

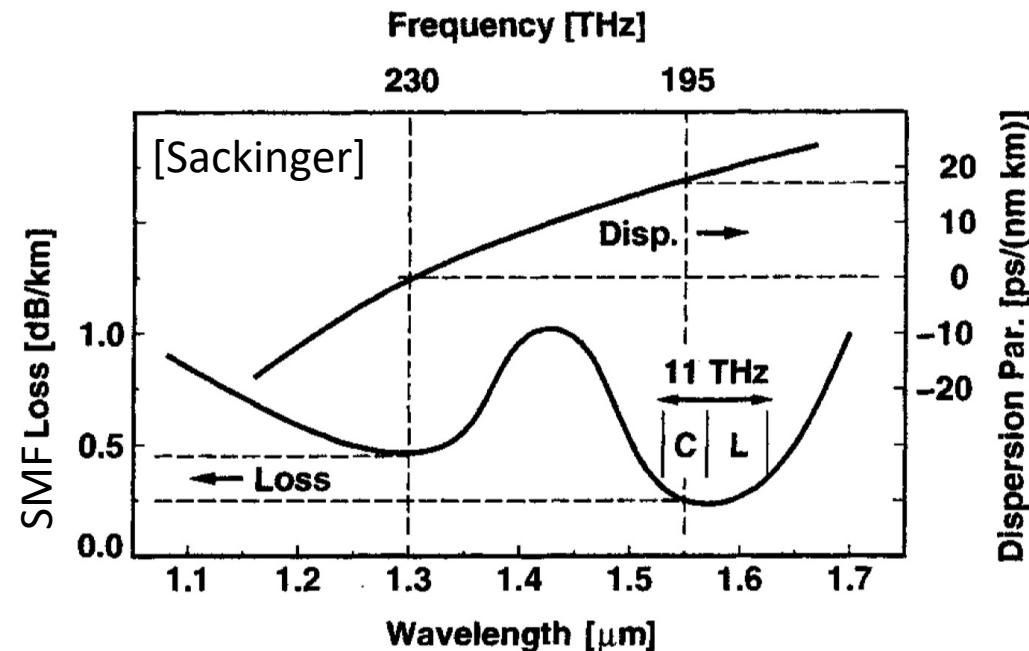

TYPICAL MULTIMODE  
CROSS-SECTION

Single-Mode (SMF)

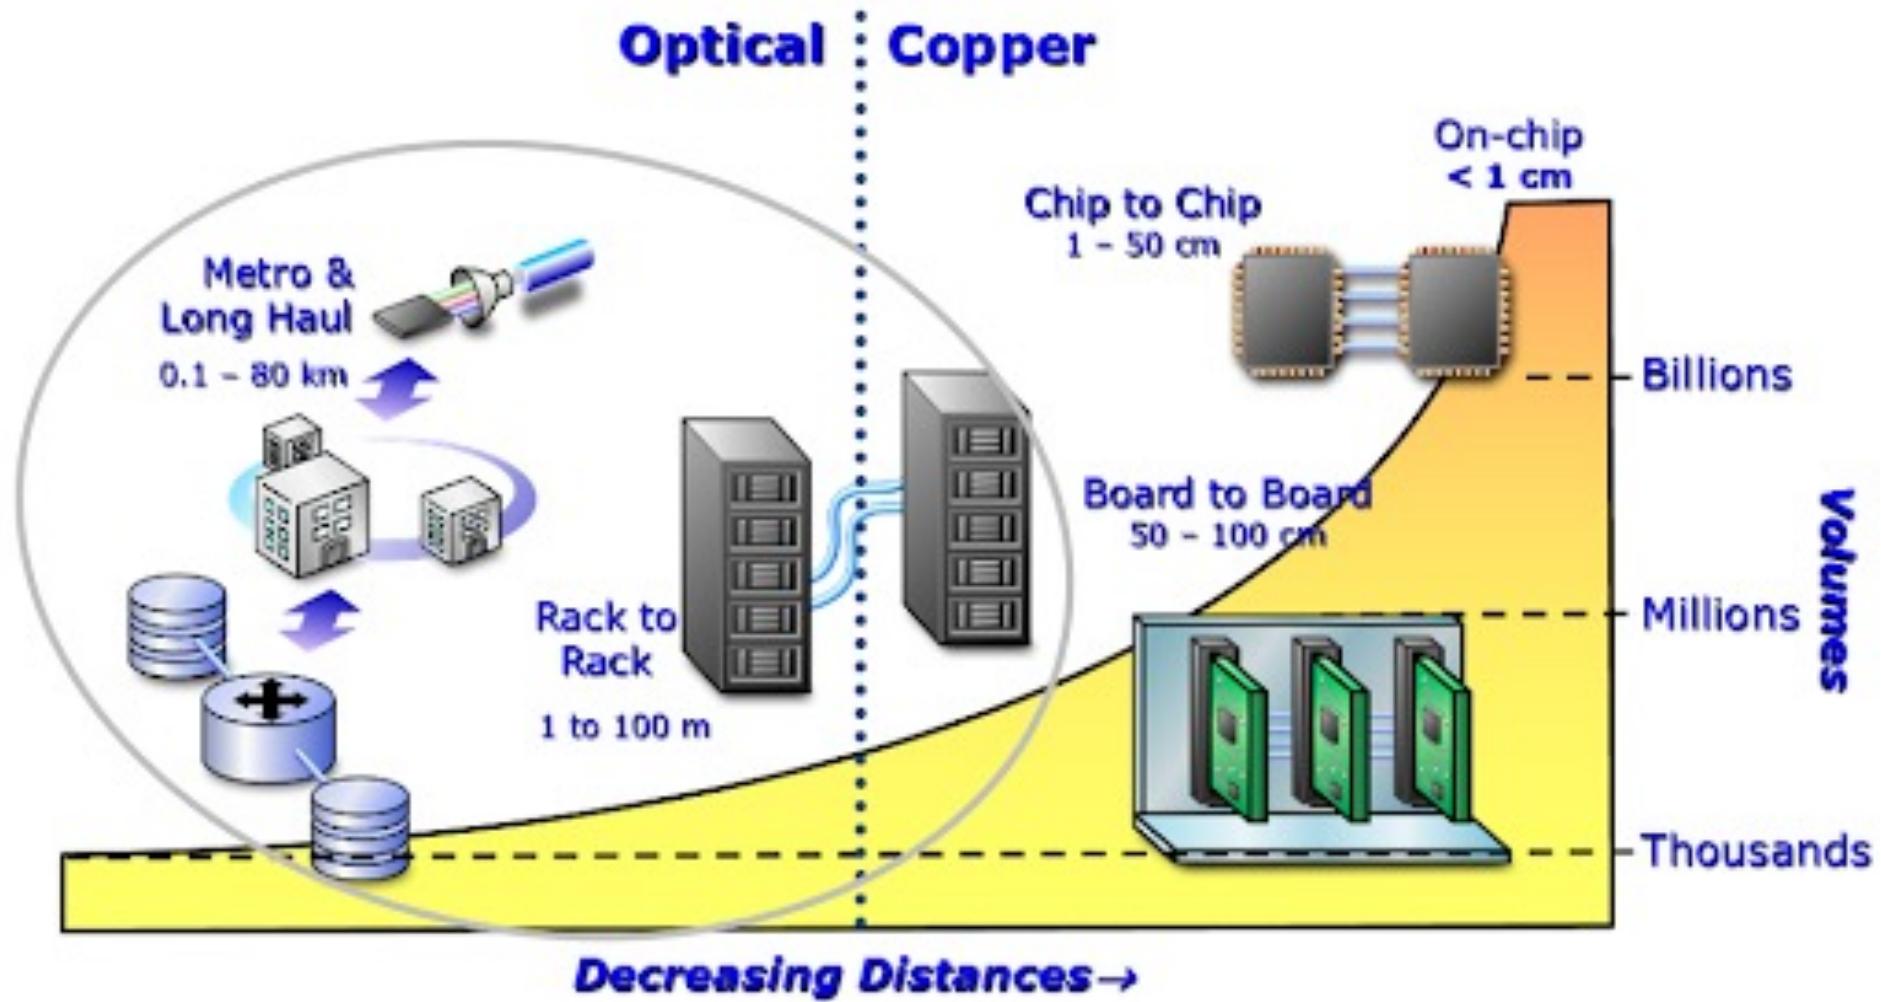

TYPICAL SINGLEMODE  
CROSS-SECTION

- Multi-mode vs. Single-mode fibers
  - Dispersion, Cost, ...
  - MMF for short (< 300m) & SMF for longer distances
- Lowest fiber losses: 1310nm (O-band) & 1550nm (C-band):  $\sim 0.1\text{db/km}$ !
  - 1550nm for long-range communication (tele-communication)

# Interconnects

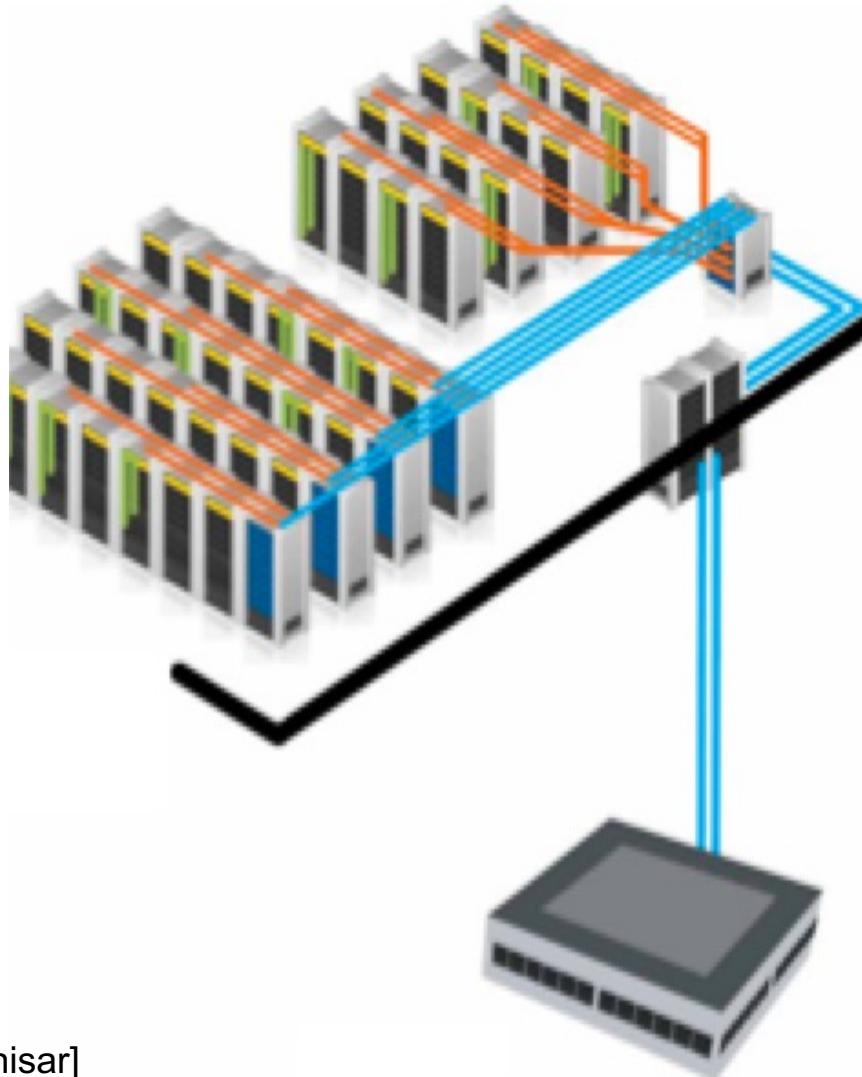

Source: Prof. John Bowers

# *Optical Links*

As of 2018:

<b>Long-span Inter-building</b>	40G → 100G → <b>200G/400G</b> → <b>Tb/s</b>
2km/metro	Single-mode Fiber <b>Optical</b>
<b>Inter-rack</b>	40G → 100G → <b>200G/400G</b> → <b>Tb/s</b>
20m-2km 1-20 m	Single-mode Fiber Multi-mode Fiber <b>Optical</b>
<b>Intra-rack</b>	10G → 25G → 56G → <b>100G/200G</b> → <b>400G&lt;</b>
0.5-3 m	Copper Channels Multi-mode Fiber <b>Electrical/Optical</b>

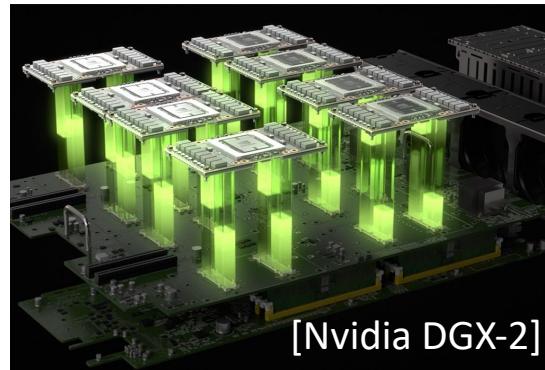

[Finisar]

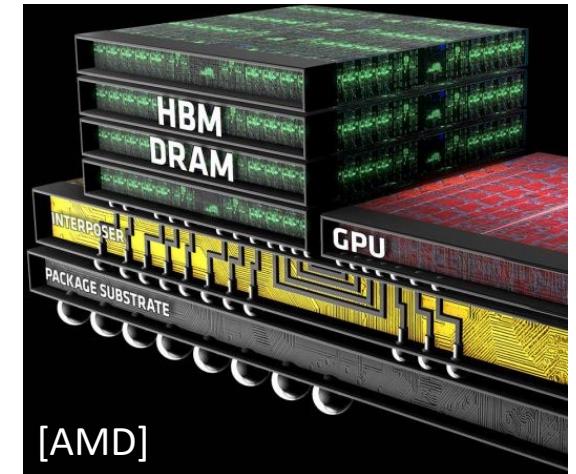

# *Emerging Needs for Photonics*

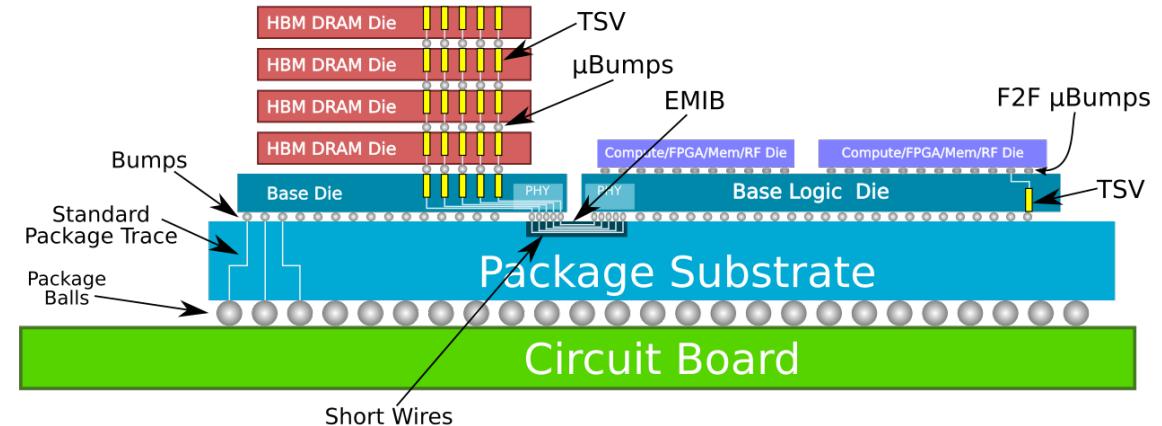

**32x400 Gb/s**

**4.8Tb/s**

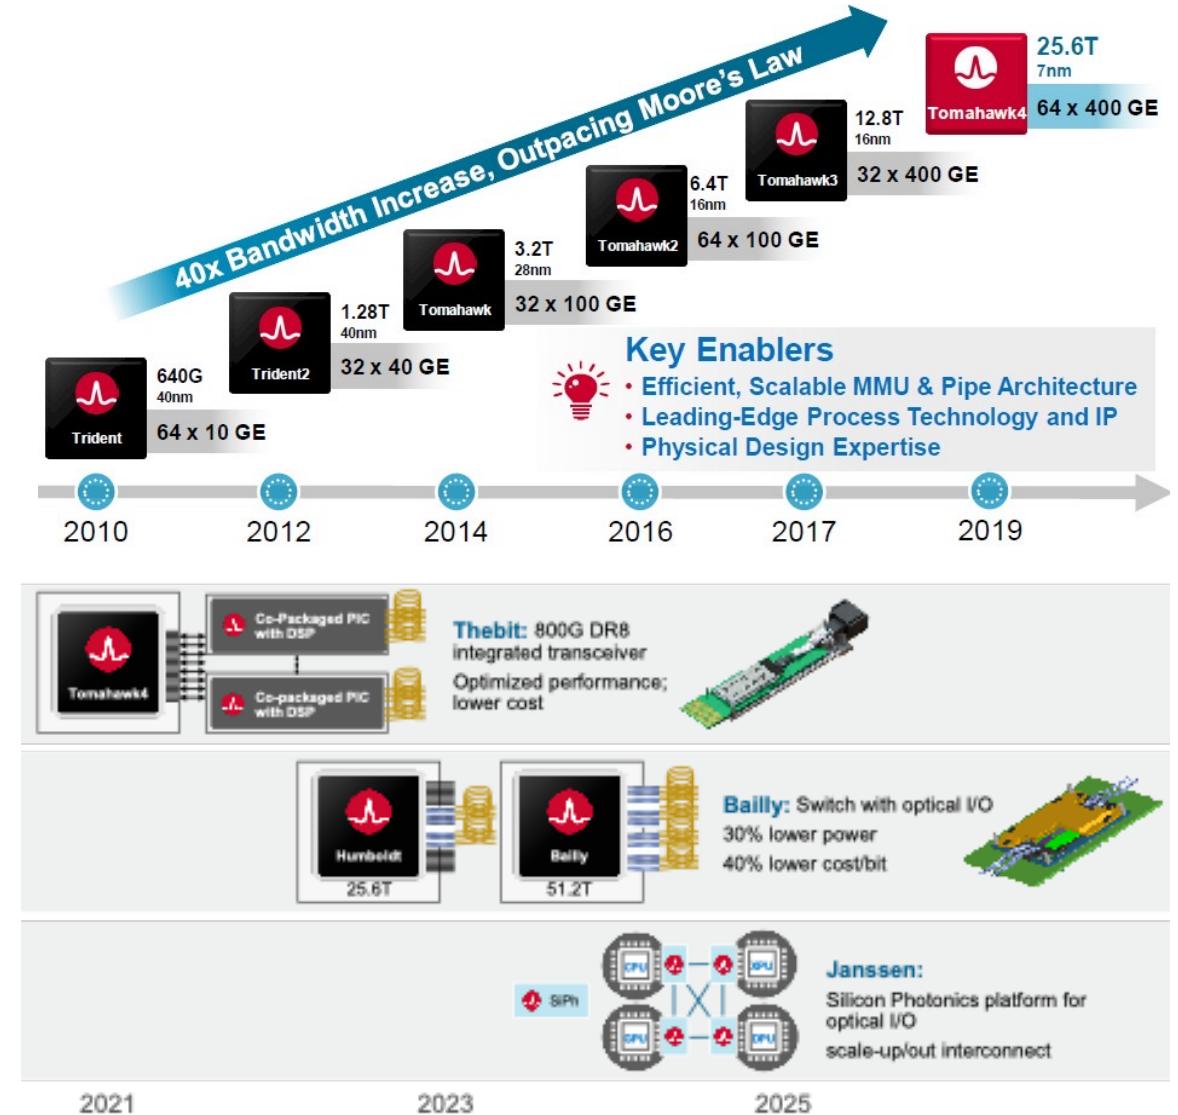

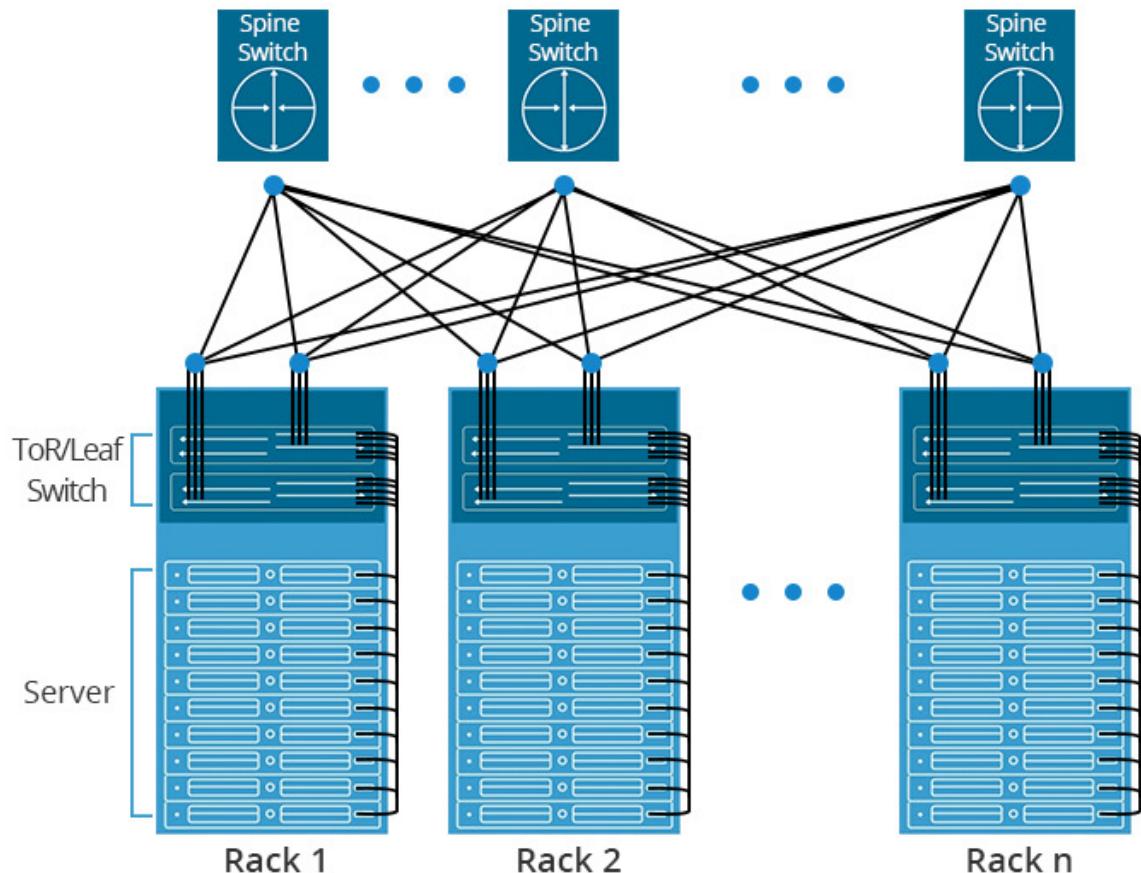

- **Demand for ultra-high data-rates!**
  - Heterogeneity: HBM, ...
  - Advanced integration and packaging
- **Time for photonics to join ...**
  - Energy-efficiency & High-bandwidth density

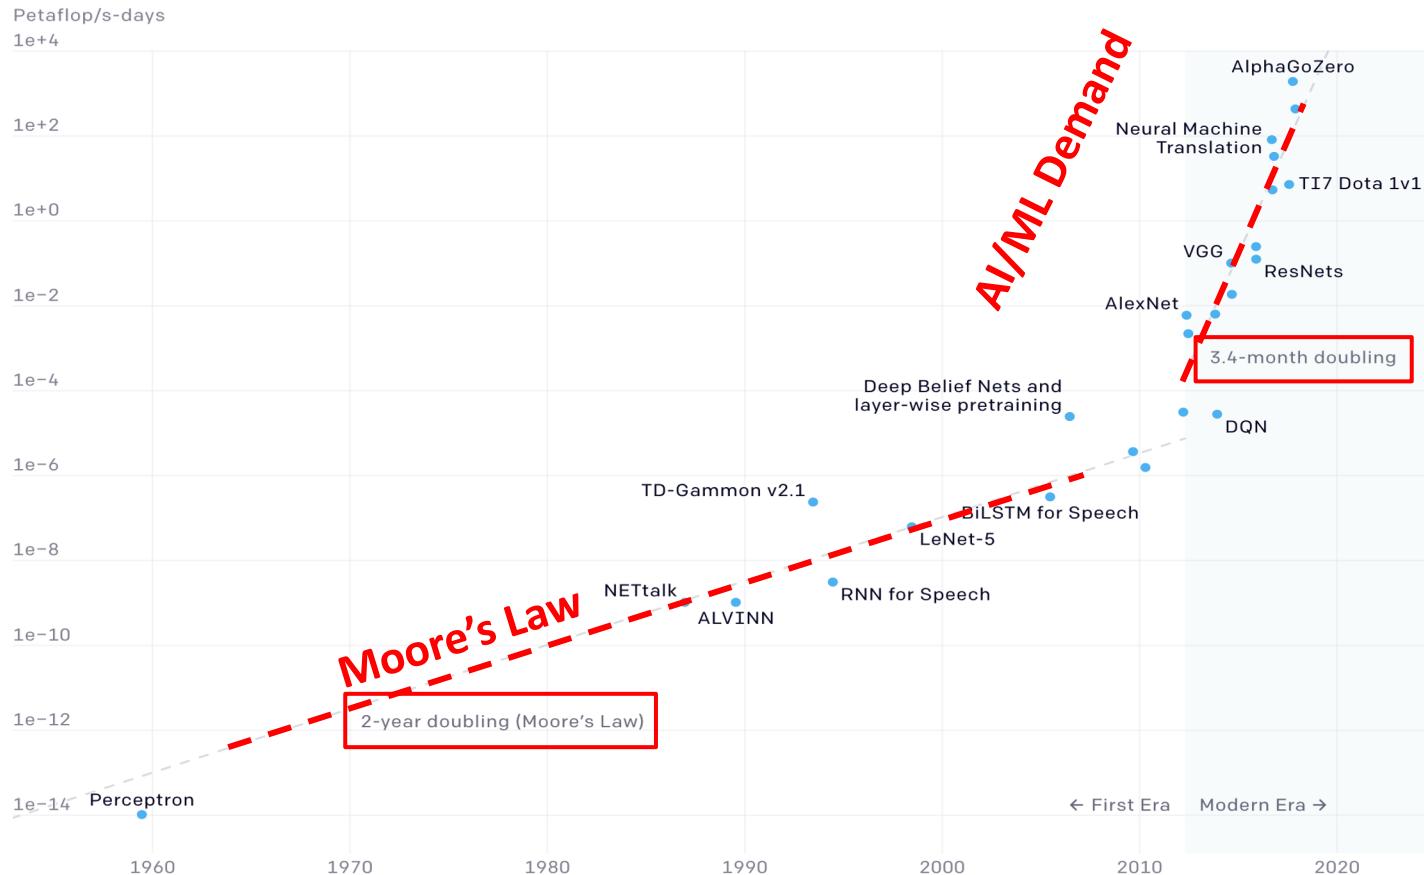

# *Example: Top-of-the-rack (ToR) Switch*

The leaf switches are not connected to each other and spine switches only connect to the leaf switches (and an upstream core device).

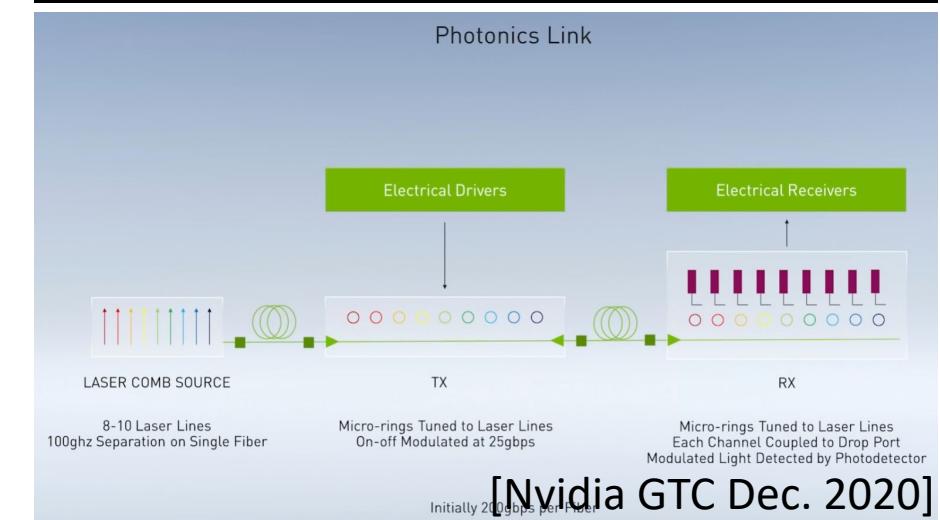

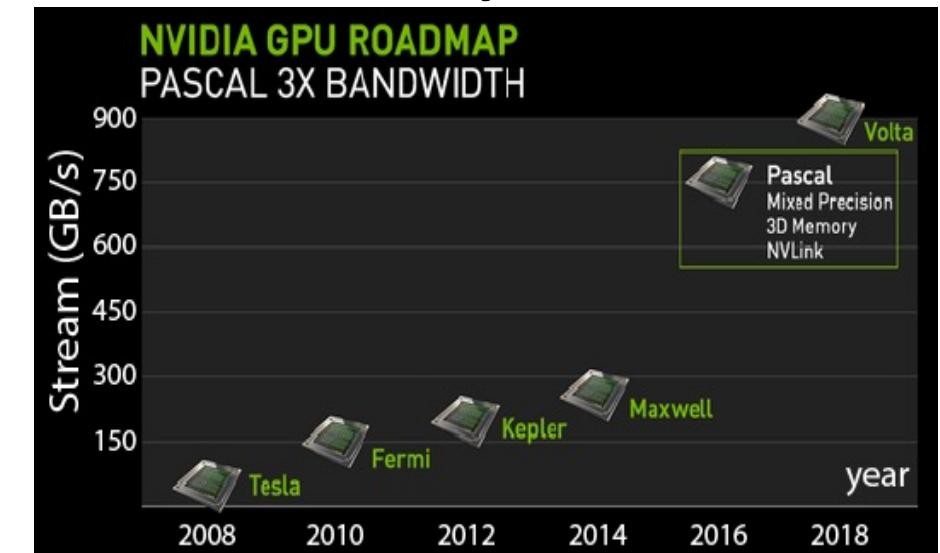

# Emerging Demands by ML/AI

Two Distinct Eras of Compute Usage in Training AI Systems

[Open AI]

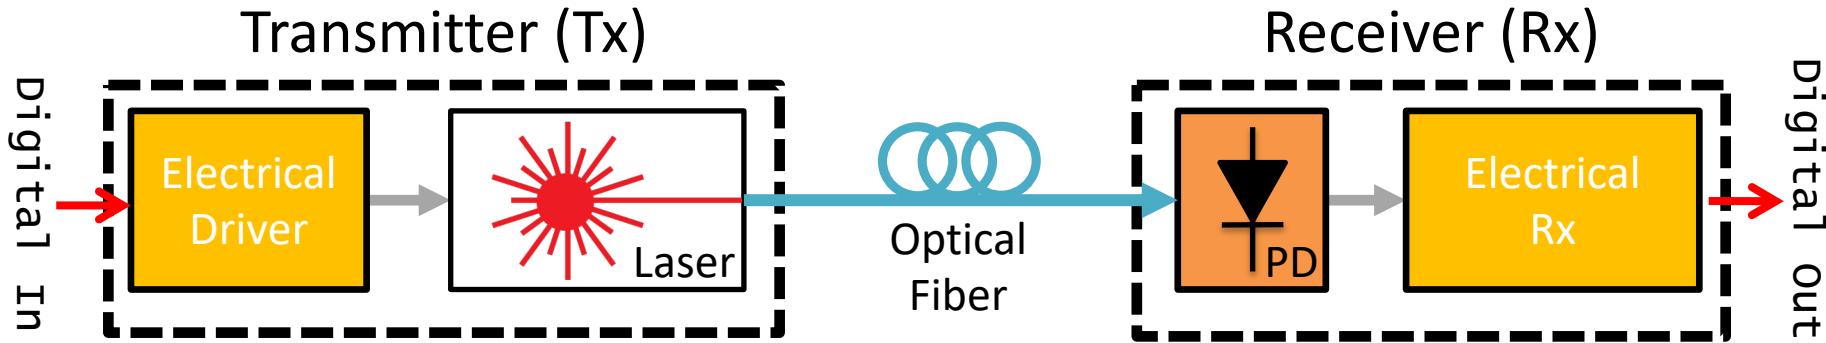

## GPU Memory BW Growth

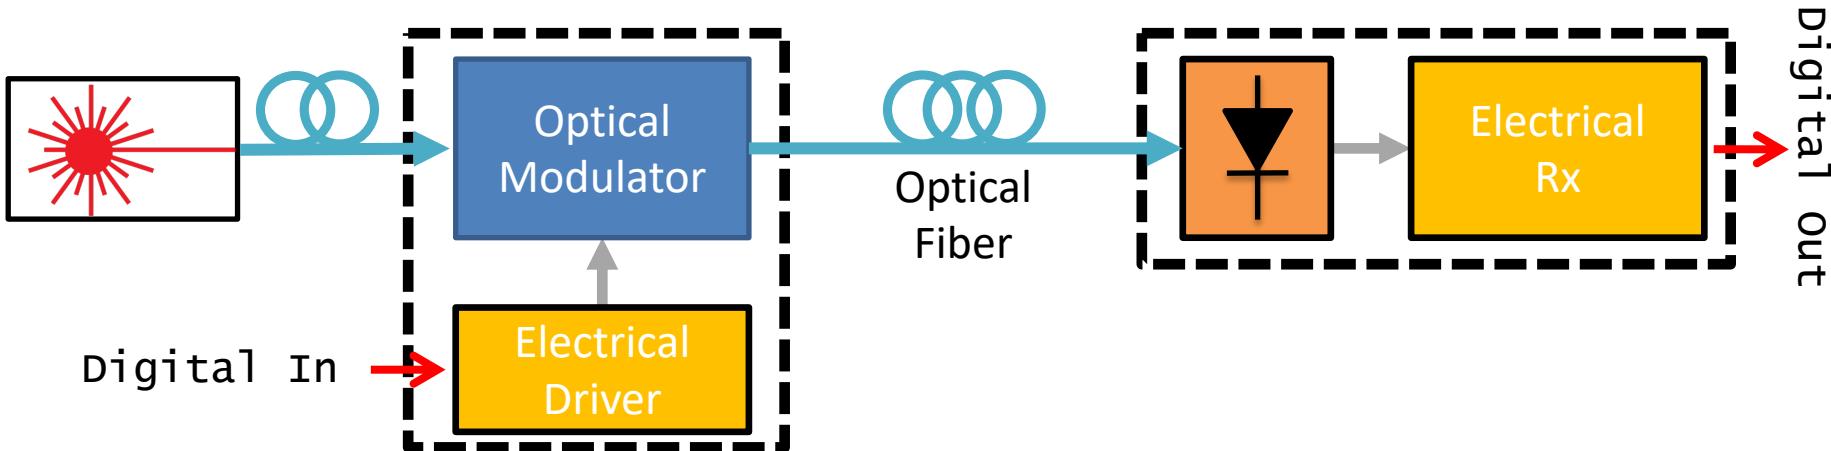

[Nvidia GTC Dec. 2020]

# *An Optical Link*

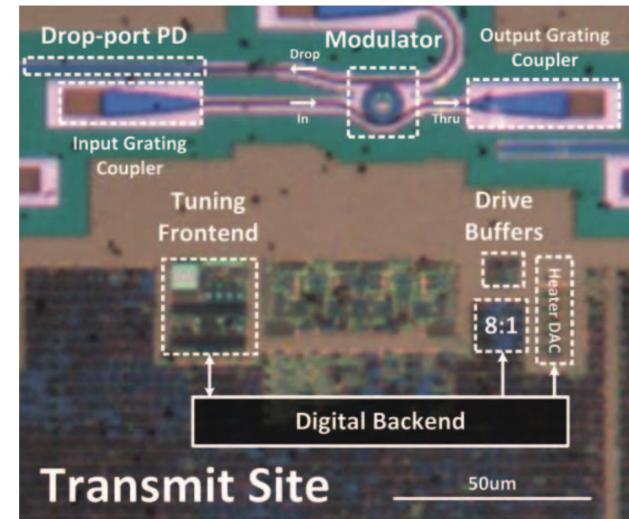

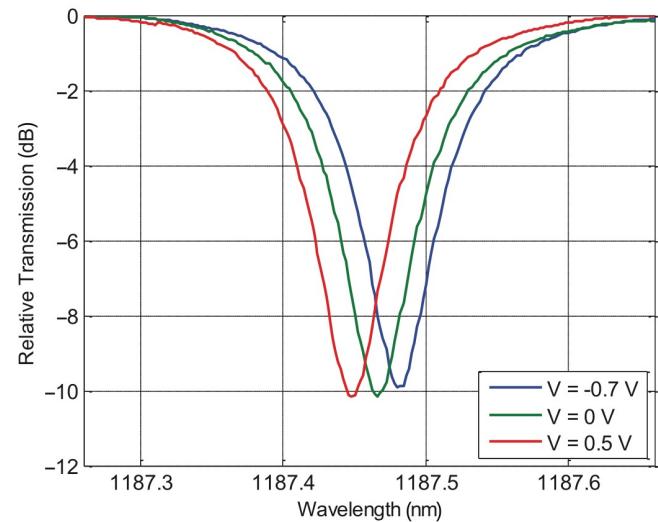

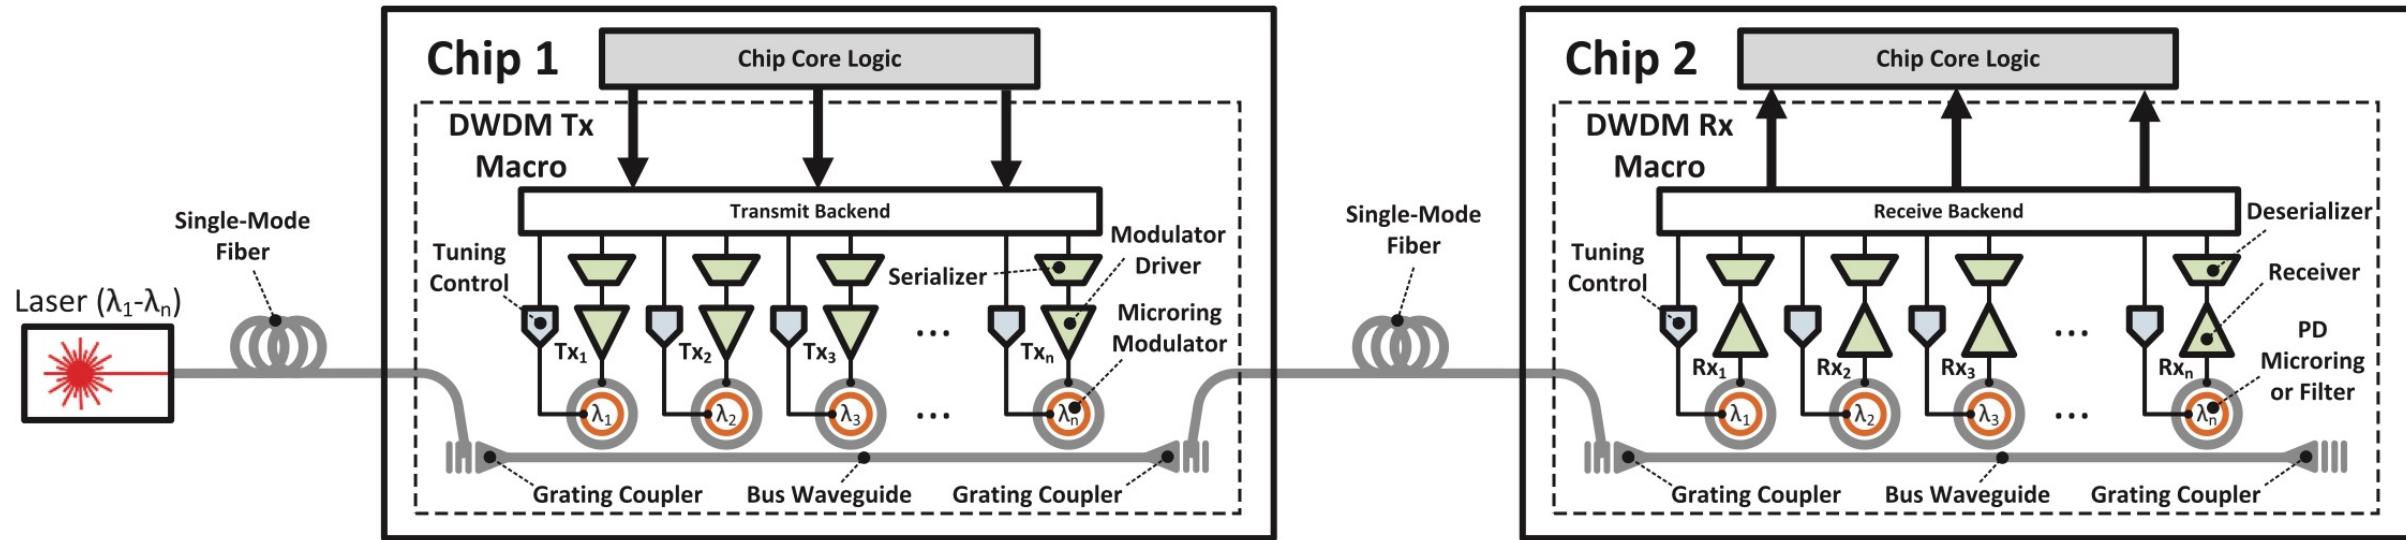

## Directly Modulated Laser

## Externally Modulated Laser

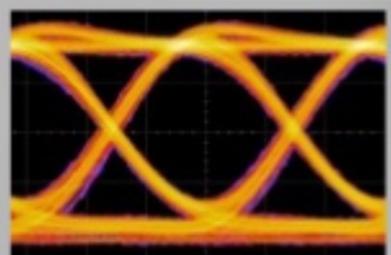

# MRM-based Optical I/O

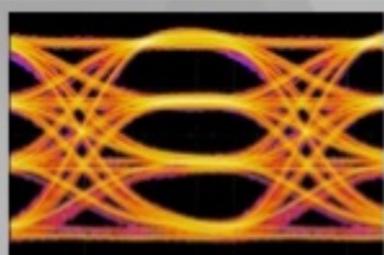

[Chen Sun, JSSC 2016]

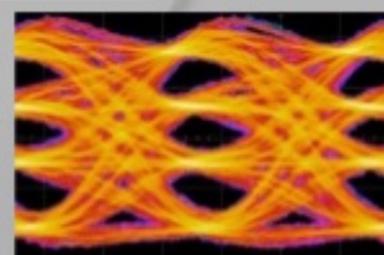

# *Optical TRX Examples*

40Gb/s NRZ

50Gb/s PAM4

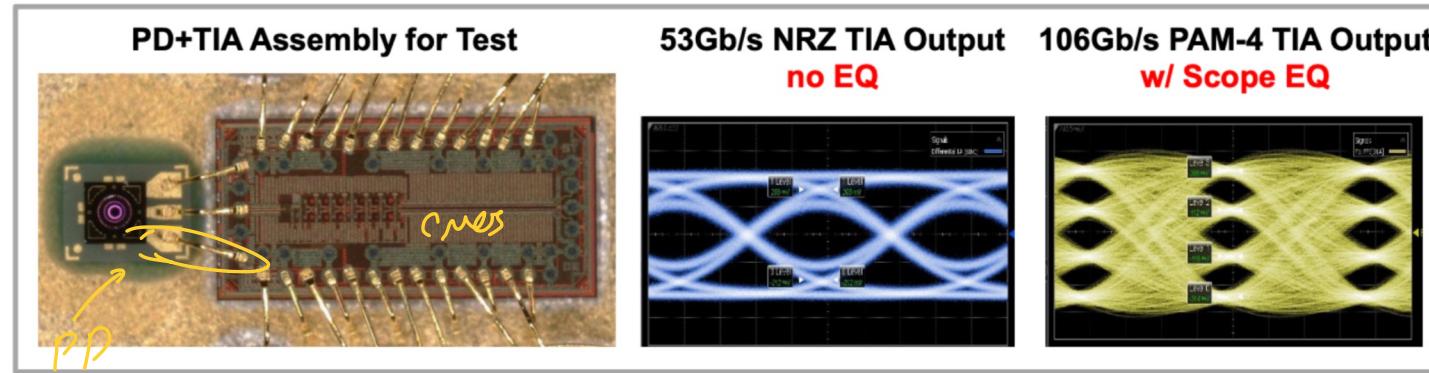

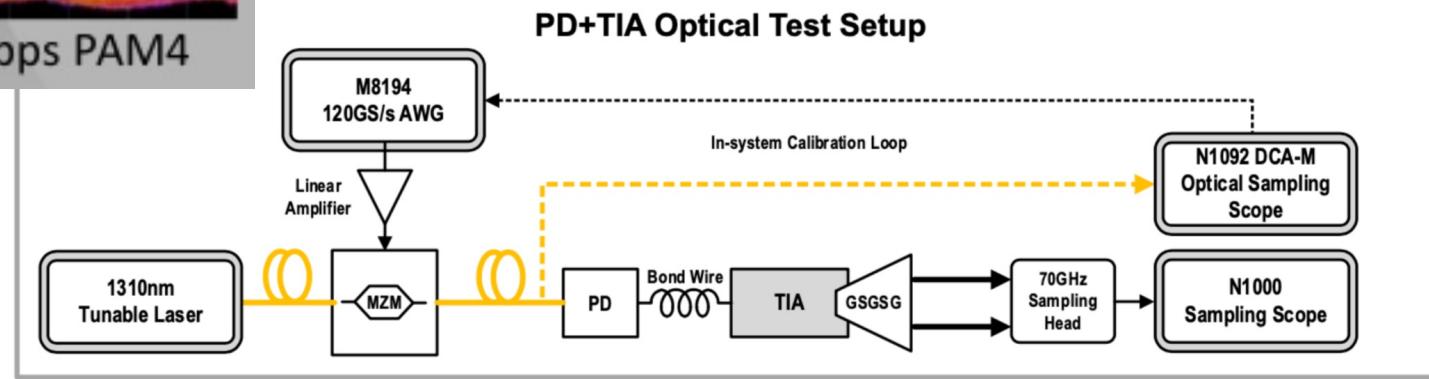

100Gb/s PAM4

[Ayar Labs]

**Bandwidth limitations!**

**Energy: 5-10pJ/b!**
